My Story: A Professional Snapshot

Senior Software Engineer with **over 8.5 years of experience** in building resilient, high-performance systems. Expert in backend development using **C# and Golang**, with a comprehensive understanding of the full software development lifecycle—from designing microservices architectures to advanced DevOps practices and infrastructure optimization. Proven track record of solving complex scalability issues and ensuring the availability of mission-critical systems.

Skills at a Glance

- **Backend Technologies:** C#, Golang, Microservices, Event-Driven Design, High Availability Systems, Messaging & Notifications (Kafka), Distributed Caching (Redis);
- **Cloud & DevOps Engineering:** Docker, Git, GitHub, GitLab, CI/CD, AI-Augmented Development;
- **Frontend Frameworks:** TypeScript, JavaScript, React, Angular;
- **Data & Persistence:** SQL Server, PostgreSQL, MySQL, MariaDB;
- **Cloud & Serverless:** Azure Functions (HTTP-triggered), Azure DevOps, AWS (Lambda, SQS, RDS.

My Learning Path: Academic Milestones

- **MBA in Software Engineering** – Faculdade Metropolitana do Estado de São Paulo (2024);
- **Post-graduate in Database Administration (DBA)** – Faculdade Metropolitana do Estado de São Paulo (2024);
- **Post-graduate in Internet of Things (IoT)** – Faculdade Metropolitana do Estado de São Paulo (2024);
- **Associate's Degree in Information Technology –** FAETERJ (2018)

Where I've Made My Mark: Professional Experience

Software Engineer @ Compass.UOL (May 2024 - Present)

- **Architectural Design:** Leading the design and implementation of scalable microservices from the ground up, utilizing **C#** to ensure system resilience and high availability;
- **Performance Engineering:** Analyzing and refactoring legacy backend services, significantly optimizing query performance and reducing system latency in high-traffic environments;
- **Cloud & Serverless:** Implementing event-driven architectures and HTTP-triggered services via **Azure Functions**, focusing on cost-efficiency and cloud-native scalability;
- **Process Innovation:** Leveraging **AI-augmented development** tools to streamline coding workflows, accelerating delivery cycles while maintaining high standards of code quality.

Mid Software Developer @ Compass.UOL (Feb 2022 - April 2024)

- **Backend Engineering:** Developed and maintained scalable services for the financial sector using **C#/.NET** and Azure cloud components (Key Vault, Logic Apps, API Management), ensuring high system availability;
- **System Reliability & Performance:** Significantly improved performance and reliability by optimizing complex ETL processes and critical cron jobs, reducing operational overhead;
- **Technical Leadership:** Actively participated in architecture discussions and led code reviews, supporting the Tech Lead and contributing to the team's engineering standards and code quality;
- **Cloud Integration:** Successfully integrated and managed **AWS services (RDS, SQS)** to facilitate asynchronous processing and efficient large-scale data management.

Junior / Mid Software Developer @ Nasajon Sistemas (Sep 2017 - Feb 2022)

- **Issue Resolution:** Spearheaded a bug-fixing initiative that reduced the integration backlog from over 400 issues to fewer than 5, drastically boosting product stability;
- **Rapid Career Growth:** Promoted to Mid-level Developer in half the standard time due to high technical performance and impact on core product delivery
- **SDLC:** Engaged with structured development processes, gaining daily experience utilizing the Agile methodology.
